ANSWER GIVEN BY 15 DECEMBER 2020 12:00:00

1 MULTIPLE CHOICE

Which of the following statements regarding the E also is correct?

- They are made of alpha-actinin
- They are composed of actin and myosin
- They do not bind to myosin filaments
- They can be located only at the edges of cardiomyocytes

2 MULTIPLE CHOICE

Which of the following statements regarding the red muscle fibers is NOT correct ?

- They contain sparks
- They have more mycoglobin
- They have more lipid droplets
- The have less glycogen
- They have more mitochondria

3 MULTIPLE CHOICE

What is the average lifespan of lymphocyte?

- Have a few hours to a few decades
- 100 days
- 10-12 hours
- 6-12 days
- 1-2 days

4 MULTIPLE CHOICE

Which of the answers regarding the stratified epithelium is true?

- None of the answers are true
- It is only keratinized
- It is only non-keratinized
- It is only ciliated
- It is only transitional (Hamb)

5 MULTIPLE CHOICE

How many lobules can we typically find in a heterophilic granulocyte?

- one , two
- Usual , five
- two , six
- five , twelve
- none of above

6 MULTIPLE CHOICE

Which gland participates in myelin formation in the PNS?

- Schwann cell
- Oligodendrocyte
- Ependymal cell
- Protoplasmic astrocyte
- Fibrous astrocyte

7 MULTIPLE CHOICE

Hyaline cartilage is present in the listed structures except for:

- epiglottis
- articular surfaces
- 3 shapped rings of the trachea
- costal cartilages
- nasal cartilages

8 MULTIPLE CHOICE

Identify the tissue shown on the picture

- Complex tubuloacinar seromucous gland: serous, mucous and mixed secretory units.
- Exocrine portion of smooth muscle cells in a wall intestine.
- Simple tubular mucous glands in large intestine.
- Acquire epithelial in its form of follicle - thyroid gland.

9 MULTIPLE CHOICE

Identify the depicted cell

- Acrophilic granulocyte
- Mast/basal cell
- Melanocyte
- Goblet cell

10 MULTIPLE CHOICE

Identify the indicated cell

- Basal cell
- Myoepithelial cell
- Goblet cell
- Dome-shaped cell (enterocyte)

11 MULTIPLE CHOICE

Identify the indicated tissue

- Simple columnar epithelium with a brush border - small intestine
- Endocrine epithelium, organized in follicles - thyroid gland
- Squamous stratified nonkeratinized epithelium - esophagus
- Simple tubular mucous gland - large intestine

12 MULTIPLE CHOICE

Identify the indicated cell

- Lymphocyte
- Melanocyte
- Eosinophil
- Megakaryocyte

13 MULTIPLE CHOICE

Ceramide are involved in all of the following EXCEPT:

- ATP synthesis
- Endocytosis
- Apoptic formation
- Intracellular traffic
- Lipid rafts

14 MULTIPLE CHOICE

Rhinovirus attach to which organelle

- Vesicle
- Golgi cell
- Smooth cell
- Golgi complex
- Plasma membrane
- Mitochondria

15 MULTIPLE CHOICE

Which of the following proteins is associated with physiochemical stability

- Spectrin
- Ion channel
- Cyclotion coupled receptor (GPCR)
- Calcedo receptor
- Tyrosine kinase receptor

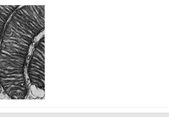
16 MULTIPLE CHOICE

Which of the following cytoskeletal elements is important for the nucleus

- Intermediate filaments
- Actin filaments
- Microtubules
- All are important
- None are important

17 MULTIPLE CHOICE

Identify the depicted organelle



- smooth endoplasmic reticulum
- Microtubules
- Microfilaments
- Golgi complex

18 MULTIPLE CHOICE

Which of the following answers is TRUE?
A patient presents to the clinic complaining of difficulty in blood to which of the following disorders?

- Down syndrome
- Kartagener syndrome
- Kaposi's-Fitz-Hugh
- Deutscher syndrome
- None of the answers is correct

19 JUMBLED SENTENCE

Match each of the listed tissues to the structure from the drop-down menu, which is characteristic for the corresponding tissue type
1) Covering epithelium in **mesothelium**
2) Lining epithelium in **endothelium**
3) Nerve tissue in **neuron**
4) Glandular epithelium in **end of Langerhans**
5) Nerve tissue in **neuron**

20 MULTIPLE CHOICE

From the 3rd month, the homogenous is

- Endocardial
- Present in homogenous jab
- Extraembryonic
- Trophoblast

21 MULTIPLE CHOICE

Which of the processes listed is NOT a stage of the fertilization?

- Acrosomal reaction
- Cortical reaction
- Gametes' maturation fusion
- Capacitation
- Zona pellucida

22 MULTIPLE CHOICE

The following structures are NOT derivate from the endodermi

- Bones of pelvis
- Muscles of arms
- Small and colon
- Nervous system
- All answers are true

23 MULTIPLE CHOICE

Which effect have progesterone of the ovrian?

- They reduce viscosity of cervical mucus, making it easier for sperm to travel up cervical canal into uterus.
- They are hydrophilic enzymes that create the endometrium.
- They stimulate peristaltic contractions of female reproductive tract
- a , c
- None of them

24 MULTIPLE CHOICE

How does the female reproductive tract action sperm migration?

- a. by secretion of vaginal acid
- b. by uterine contractions during orgasm and anandrel of cervical mucus
- c. by a chemical secreted by the egg
- a , c
- a , c

25 MULTIPLE CHOICE

CLICK FOR MORE INFO FROM ANSWER IN CLOSED FORMAT AND IN OPEN FORMAT

- Bulbourethrals or Glands of Cowper
- Cuboidepithelial or Glands of Bartholin
- Paraurethrals Glands
- Periurethral Glandsin
- Endoderm

26 MULTIPLE CHOICE

The number of somites in the end of the 5th week of development is

- 30-35 pairs
- 40-45 pairs
- 45-47 pairs
- 50-55 pairs
- 35-35 pairs
